

# **How To Spend \$10,000 Of Someone ELSE'S Money... To Get Rid Of YOUR Mold Problem!**

*Legally! Plus, Everything Else You Need To Know About Mold!*

## **So, You Think Might Have A Mold Infestation.**

Despite what you may think, *today is your lucky day.*

Because you've just found the only report in the world you NEED to read before you take any action.

In fact, JUST by reading this report, you will learn practically everything you need to know about your problem and how to solve it.

Such as:

- The DANGERS of mold - just how bad is that stuff for you?
- What THEY haven't been telling you.
- How to completely ERADICATE your mold problem - without spending a penny!

And it will also teach you something even more important than that... and that's how to avoid the little mistakes that almost everyone makes when it comes to mold.

Because those "little mistakes" can cost you *tens of thousands* of dollars, *weeks* of wasted time, and in the worst case scenario - you and your family's health.

First things first.

### **What Is Mold?**

Despite it's bad reputation, mold is a natural part of our ecosystem.

Its job is to "clean up" the environment, by breaking down old organic matter such as dead leaves, trees, and other vegetation.

And, on its own, it's (usually) completely harmless.

So then...

### **Why The Heck Should You Be Worried About A Little Mold?**

Because while the mold itself is generally harmless...

The toxins it produces are *not*.

Even after all this time, there is little conclusive scientific agreement on the full effects of these toxins. But here's what we DO know.

The United States Environmental Protection Agency (EPA) notes that "Molds produce allergens (substances that can cause allergic reactions), irritants, and in some cases, potentially toxic substances (mycotoxins). Allergic reactions to mold are common."

The Institute of Medicine (IOM) found there was "sufficient evidence to link indoor exposure to mold with upper respiratory tract symptoms, cough, and wheeze in otherwise healthy people. Other recent studies have suggested a potential link of early mold exposure to development of asthma in children."

In other words, living in a mold-infected home will make you feel like you have a

cold year-round. If you have children, the dangers are MUCH worse.

Of course, that's the most common kind of mold. The generally "harmless" kind.

There are rarer cases that you would *swear* came straight out of a horror film.

The scariest thing is, you won't know what the possible symptoms are until you know what kind of mold you have.

It could be harmless...

*But what if it isn't?*

So yes, be worried.

## **Your Family's Health Isn't The Only Thing You Need This Affects...**

If you own your own home, you'll want to pay VERY close attention to what I say next.

If you don't, you might end up spending *tens or hundreds of thousands* of dollars you don't otherwise need to spend.

Mold is *specifically* designed to break down dead organic matter like fallen trees into a mush that can be absorbed by the soil.

So... what do you think mold would do to a house made out of wood if left unchecked? Or one with wooden supports?

Don't think you are safe if you have drywall or stucco.

The porous nature of those materials is an *ideal* environment for mold. Not only does it allow mold to multiply quickly behind your walls - it makes it extremely difficult to kill.

In other words, outside of the fact that nobody is going to be interested in a house infested with mold, there is an invisible clock ticking down right now on your property.

With every minute, your very home is degrading around you.

## **Haven't Heard Of This Before? You're Not The First.**

This is pretty scary stuff.

Let's be clear, we are NOT talking about that little fuzz that's just going to force you to throw out a bag of tomatoes.

We are talking about something that's going to DESTROY your home, wipe out the value of your property, corrode the very walls around you.

We are talking microscopic spores that float into your lungs and STAY there, causing untold damage to health and every day living.

Despite what you may think, mold problems are not at all uncommon, especially in areas with high humidity.

In fact, best estimates are that over 70% of ALL HOUSEHOLDS in the United States have mold problems.

Seventy percent.

Isn't that a little curious?

That such a big, potentially life-changing problem receives so little attention?

That there hasn't been more research into the possible health risks?

Isn't it a little surprising that most people don't even have an inkling of what those little dark spots can do to their health, home, and family?

It IS strange. It IS unusual. It's downright BIZARRE, in fact.

And there's a reason for that. Ladies and gentlemen...

## **Let Me Apologize In Advance.**

Because I'm about to tell you something you may not want to hear. Something that's going to make your faith in humanity *crumble*.

You are not imagining things.

You are NOT wrong in thinking that knowledge and study of this problem should be a LOT more pervasive than it actually is.

The truth is, and I promise I'm not anywhere NEAR a tinfoil hat...

## **There IS A Conspiracy Going On... And You Are A Victim Of It!**

The *mold* conspiracy.

Sounds a little funny right? Haha.

But the ones *really* laughing are the insurance companies... all the way to the bank.

The truth is that most home insurance actually covers mold damage. You probably didn't know that... and that's not your fault.

Because if more people knew mold was a such a big problem - who do you think would lose out?

Not me. Not you.

It'd be the corporate fat cats who are probably counting your money **AT THIS VERY MOMENT.**

It is no coincidence that information on the dangers of mold are so hard to find. That there are so many articles that tell you a little bleach can solve all your problems. (Hint: It can't.)

It's not *chance* that so few people actually know the danger mold can pose to their families and their health.

The truth is that...

## **Insurance Companies Will Gladly Trade You And Your Family's Health For Their Profit.**

For the almighty dollar.

Because if people don't realize what a big problem mold is... if they don't know

that their insurance can cover mold damages and inspections... if they never check to see what they are OWED...

Then the insurance company gets to keep all the money you pay them for SPECIFICALLY that purpose. Money that is *rightfully yours*.

Makes your blood boil, doesn't it?

But don't worry, I'm going to show you *exactly* how to obtain what you deserve.

**In fact, there's a way to get professional mold inspections and cleaning WITHOUT PAYING A DIME.**

And I'll get to that in a moment, but first, let me tell you WHY you need a professional.

First things first:

**Don't Even THINK Of Trying To Remove It Yourself.**

Let me guess.

You did a search on Google and it told you that with a little Clorox and elbow grease all your mold problems are *history*.

But taking that advice seriously would be a HUGE mistake.

It's true, bleach CAN kill mold.

Here's the problem though.

It can only kill the mold it can actually *reach*.

If your mold is growing on drywall, in wood, or behind the immediate surface, all bleach does is make the mold STRONGER and more pervasive.

Plus, that solution only works on SOME molds.

To summarize, you CAN do it yourself...

- If the mold you're treating is ONLY growing on the surface...
- If you have the right kind of mold...
- If you catch it early enough...

Tell me, do you think you are lucky enough that all those conditions are true?

To make it worse...

**There Is No Real Way To Tell What KIND Of Mold You Have.**

Not without professional equipment.

It's like coming across a wild mushroom in a forest and trying to judge whether it's safe to eat. Even top experts on mushrooms wouldn't take that chance.

Why?

Because molds (and a mushroom really IS just a certain kind of mold) are notoriously difficult to distinguish from each other.

You can't tell by looking at it. You can't tell by smelling it. You can't tell by feeling it.

And I would *definitely* not recommend tasting it!

So...

## **How Do The Experts Do It?**

Knowledge of the area and types of molds in the area. Years of experience. And the right equipment.

It's worth noting that different experts have different ways of carrying out an inspection, and it's important to have the *right* person examining your home.

Temperature and moisture readings are often combined with visual inspection to pinpoint the kind of mold you have.

That then determines HOW to remove the mold, which is a complicated process that involves isolating the mold and cleaning the air.

Bleach is NOWHERE in the equation.

In other words, if you have even a suspicion that you have mold, you NEED a mold inspection.

Especially since these inspections are almost always FREE.

But what if an inspection uncovers a serious mold problem?

A mold remediation, depending on the extent of the damage, may cost thousands of dollars.

When you consider your family's health, that might be a bargain.

But I want to tell you a secret.

Something that the insurance companies don't want you to know.

The truth is...

## **There's A Way To Get A Full Mold Remediation Without Paying ANYTHING.**

You know the risks of letting mold continue to grow in your house. Damage to your property, health, and your family's health.

Depending on the type of mold you have, it can even be WORSE than that.

So getting an expert to take a free look at your home *shouldn't be a question*. But the price of an actual mold remediation is.

Luckily for you, if you have homeowner's insurance, there is a good chance that the full cost of mold remediation can be covered... which means you pay NOTHING.

Generally, a typical homeowner's policy will cover between \$1,000 - \$10,000 in mold remediation and repair. That's enough to resolve all but the most critical issues.

And if you DO have one of the rarer types of mold...

Well, money is suddenly no longer your biggest concern.

In other words, you have NOTHING to lose by contacting a mold remediation specialist to get a free inspection.

Just make sure to call your insurance company AFTER you get an inspection, to see if your damage is covered.

## **BEWARE! Not All "Certified" Specialists Are The Same!**

You might think that a company which names itself "certified" has been through special tests and processes to obtain that certification.

The unfortunate truth is that the mold removal industry is NOT a well regulated industry, and resembles the wild wild west more than anything else.

ANYONE can call themselves certified.

And if you hire one of those charlatans... well, you actually might be better off with the bleach!

But there ARE certain certifications that are legitimate... you just need to know which ones.

I've already done all the hard work for you in vetting local companies and making sure their credentials are excellent.

You can find a list of them at the bottom of this report.

Do NOT hire some random "specialist" you find online. You will be gambling with not just your money... but also your health.

Also...

## **Always Get A Second Opinion... Or A Third!**

Even the inspections that specialists perform are not 100% accurate. That's how *hard* it is to actually determine what kind of mold you have.

I HIGHLY suggest that you don't just call *one* company.

Like getting a second opinion from a doctor, this is basically a diagnosis for your home - you want the opinion of as many experts as possible.

That ensures that you'll get the most accurate idea of what's actually growing in your walls.

You'll also be able to see which specialist takes the greatest effort to answer your questions and examine your problem.

If you're lucky, it'll be totally harmless and easy to remove. But don't take the chance that it's *not*.

## **I've Already Done All The Vetting For You.**

Not only have I checked to see which mold remediation companies in your area have the right certifications... I've also made sure that they are *reputable* companies with a base of happy customers.

Which means you can bet that ANY of the companies below will probably

provide you good service and an honest evaluation of your situation.

[List]

Don't make the mistake that so many other homeowners have made. A single day delayed in getting that free inspection means another day of you and your family living in a possibly toxic environment.

Contact one of the companies below today.

And if you have any questions about what I've written here? Shoot me an e-mail at [EMAIL@EMAIL.com](mailto:EMAIL@EMAIL.com). I'd be happy to answer your inquiries.

## **About The Author**

Joe Burnich is a professional home cleaning man and a consumer rights advocate.

Years in the cleaning industry have shown him countless homes and families affected by this seemingly "rare" problem. Shocked at how prevalent and serious the problem was, he created [themoldytruth.com](http://themoldytruth.com) to help spread awareness of this potentially dangerous substance.

Today, he possesses numerous (legitimate) mold certifications, and seeks to protect and educate consumers on not only the dangers of mold, but also the charlatans that would take advantage of those dangers to cheat them out of their money.
