

# **This Obscure Company Is Slated To Grow 300 - 600% In The Next 12 Months...**

"Be greedy when others are fearful," advises the legendary Warren Buffet.

As usual, the "Sage of Omaha" is dead on.

One of the most potentially lucrative investment opportunities of the decade lies in a market that most people are running away from. We're talking a "if you only invest in 10 companies in your entire life, you should invest in this" opportunity.

Gold. Silver. Zinc.

These days, precious metal investments just aren't in fashion with the investment world.

**But their loss is your gain.**

That's because the investment we're recommending today not only promises incredible returns, but involves **almost no risk**.

Now, keep in mind that we cannot predict the future. Everything we write in this article is only our professional opinion about market trends based on thousands of hours of research.

That said, we believe this may well be...

## **The Single Greatest Investment Opportunity Of The Past Few Years.**

It lies in a small mining company called Solitario.

Our colleagues at Fincom wrote an excellent report on the potential of Solitario, and we fully agree with their findings, which you can find [here](#). The company specializes in developing land for mining opportunities, and is currently valued at \$45,000,000.

Now we know what you're thinking.

**"Is it really safe to invest in a company worth less than \$100 million dollars?"**

Not *usually*.

But Solitario is an exception.

There are very good reasons to believe that this company is horrendously undervalued by the current market.

This isn't just idle speculation. This is backed by real, physical assets that are worth **several times the entire valuation of the company**.

For example, Solitario partially owns:

## **One Of The Most Incredible New Zinc Mines In The World... At A Time When Zinc Is Running Out...**

Located in Bongará, Peru, the Bongará Mine is forecasted to produce 250 million pounds of zinc a year, for over 12 years.

It's been called the "motherlode" of new zinc developments.

And it's estimated to cost over **\$230 million dollars** to develop.

Here's the interesting thing: Solitario isn't paying a penny of that.

The entire project is financed by Votorantim Metals, the \$20 billion dollar Brazilian mega corporation, and South America's largest zinc smelter.

Solitario has been contracted to develop the mine for a 30% share of the project - everything else is paid for.

That means **ZERO** development costs. Solitario is getting a free ride on a project with incredible 50% margins.

At current zinc prices, factoring in operating costs, they'll make over **\$40 MILLION A YEAR** in profit from their share of the project.

The area itself is still being fully surveyed by geologists for its true mining potential...

...But let's take a moment to think about this.

A company valued at \$45 million... generating over \$40 million a year in pure profit from a single project.

Seems a little strange, doesn't it? You're probably beginning to see why we think there's something "off" about Solitario's market valuation.

## **The Bongará Mine Is Completely Ignored When It Comes To Solitario's Market Valuation...**

\$60 million has already been invested in the Bongará project, and the total project is estimated to cost **FOUR TIMES** that at completion.

Plus, there's one other thing to consider.

Put yourself in the shoes of Votorantim Metals, a multi-billion dollar corporation and one of the biggest players in the global zinc market.

**If you had a few billion dollars to spare...**

**...Would you rather advance the payment on Solitario's interest or simply buy the entire mining site outright?**

That interest is currently worth about **\$70 million**. Given the potential of the project, it may go for **A LOT** more than that.

When the project comes to fruition, it's estimated to produce a \$40 million dollar profit in zinc per year for Solitario... enough to pay for its current valuation per in just one year.

And there are even good reasons to believe that a zinc shortage is about to hit the market, which we'll go into in just a bit.

**So how in the world is Solitario only worth \$45 million dollars?**

It isn't.

There's a huge disparity between what the market thinks the company is worth, and what it actually is.

**This will not last.**

In just **NUMBER** days, one of the major preliminary reports of the Bongará site will be released, highlighting the material potential of the project.

If you plan to invest in Solitario, you have mere days to act...

...Because the price won't stay as low as it is now once people realize the potential of this development.

And that's not even half of why we believe the company is undervalued. Let's talk about another asset of Solitario's that's about to "switch on."

Now, this is going to sound a little unbelievable, but...

**This Single Asset Will Nearly DOUBLE Solitario's Market Valuation By October, 2014**

Yes, you read that right.

**-END OF SAMPLE-**
